Difficulty: Beginner

Course Duration: 7 Days

Project 3: Task Management Web App

About this course:

Arranging and managing software projects can get significantly trickier in the event that you get rid of the systematic methodology that project management follows. Being a form of project management itself, software project management is a bit different than taking care of and overseeing projects that manage production, manufacturing or business.The software development process put resources into separating the whole work to be done in stages that would contain various tasks

and exercises, so as to gain influence when it came to management and arranging. Coming from the software development lifecycle (SDLC), a procedure that envelops planning, analysis, testing, deploying and maintenance of systems and software, the software development process aims at systematically experiencing the various phases of the SDLC to yield and maintain a product application.

While taking an online class, task management is an imperative part of the achievement. With various classes, part-time or full day jobs, individual life and various commitments included, administering productivity is quite troublesome the greater part of the occasions. Luckily, there is a wide scope of online tools intended for task management on account of working alone or collaborating with a team.

Task management definition describes that as years passed and the number of tasks we do bit by bit extended, we wound up expounding on paper on what we have to do on a particular day and on what request.

So as to make it helpful to monitor tasks, task management applications are structured. The task management application is as straightforward as a product that makes us manage our step by step plan for the day in a manner so capable that it would contain a wide scope of features, for instance, for example, calendar, reminders, file sharing, assignee, deadlines, follow-ups, etc.

In this course, you will learn to make a task manager keeping in mind all the aspects of task management in a project development lifecycle.

Course objectives:

The course objectives are:

- Explore task management tools to learn the flow
- Design a task management web app

Audience:

This course is intended for:

- Web Developers
- Any individual who is keen on learning web development

Prerequisite:

- Familiarity with at least one of the programming languages
- Basic understanding of task management process

Course Outline:

Credly Badge:

Display your Completion Badge And Get The Recognition You Deserve.

Add a completion and readiness badge to your Linkedin profile, Facebook page, or Twitter account to validate your professional and technical expertise. With badges issued and validated by Credly, you can:

- Let anyone verify your completion and achievement by clicking on the badge
- Display your hard work and validate your expertise
- Display each badge's details about specific skills you developed.

Badges are issued by QuickStart and verified through Credly.
